CHAPTER 1

Try @serieabot

If you want to play with my bot just add @serieabot to your telegram contacts and fire some commands.

This is a list of available commands:

- `ranking`: actual ranking
- `matchday`: results/scheduling
- `players`: team's players
- `player`: player details
- `help`: details about commands

CHAPTER 2

Run your own bot

In order to run the bot you have to provide:

- A Docker instance (<https://docs.docker.com/install/>)
- A Telegram bot token (<https://core.telegram.org/bots#3-how-do-i-create-a-bot>)
- A football-data token (<https://api.football-data.org/client/register>)

Then you have to build and run your container:

```
$ make docker-run BOT_TOKEN="<your bot token>" FOOTBALL_DATA_TOKEN="<your api token>"`
```

Or if you want to run your bot in background mode:

```
$ make docker-deploy BOT_TOKEN="<your bot token>" FOOTBALL_DATA_TOKEN="<your api_  
↪token>"
```
